ELECTRIC POWERTRAIN

Single-Speed Electronic Drive Selector

As the motor is an all-electric single-speed drive unit, there is no need for multiple gears. Instead, the shifter lets the driver select from the following:

- Park
- Reverse
- Neutral
- Drive
- Braking (For increased regenerative braking)

Drive Mode Selector

The driver cam determines the driving style through selecting one of the following modes:

- **Normal:** for a balanced drive that offers a compromise between performance and energy efficiency.
- **Sport:** for a dynamic drive with a responsive throttle and the highest top speed and torque.
- **ECO:** for maximum range and energy efficiency. The ECO mode deactivates all unnecessary energy-consuming features and reduces the top speed, torque and overall performance.

Charging

The Mokka Electric's charging flap's Padlock LED light up when the cable is correctly plugged in and locked and then acts as a user interface to show th e charging status via coloured LED lights:

- White: Welcome light
- Flashing Green: Charging in progress
- Solid Green: Charging complete
- Solid Blue: Delayed charging toggled
- Solid Red: Malfunction

The driver may also choose from two settings:

- **Immediate charging** (Standard settings): Start charging as soon as the vehicle is docked for charging;
- **Delayed charging:** This is esepcially useful for when cheaper electric rates are desired, eg. charging at night. Simply enter a charging start time.
